Temporal Mechanics

$$(((\exists \leftrightarrow \neg\exists) \rightarrow (\exists_1 \leftrightarrow \neg\exists_1) \ldots \infty) \leftrightarrow (\Omega\tau \leftrightarrow \Omega\tau_1)) \leftrightarrow \mathfrak{c}\tau$$

$\mathfrak{c}\tau$ = *The deep, fundamental continuum of reality. "Temporal Continuum"*
$\Omega\tau$ = *The grand, overarching span of the universe. "The Omega Temporal"*
$\exists$ = *Existence*
event horizon = when a change occurs : $\exists$ -> $\exists_1$
conclusion = the logical construct when changes have occurred: $\exists_1$ -> $\exists$

Temporal mechanics is a perspective and logical framework where uncertainty is made redundant in order to eliminate the need for God in logical frameworks. Existence is. Logic of existence in itself is unstructured, without movement or change.

Life is the cause of logical change. Logical change causes progression in the logic of existence effecting a continuum which we perceive as time, the floating point in the absolute. To simplify this idea, we can compare existence to a language model's logic, and life to the ever changing prompt.

"When you discard the premise of a linear, ticking timeline in favor of an absolute, timeless foundation where life's progression dictates logical distance, those cosmological paradoxes stop being unresolvable physics problems and simply become artifacts of a flawed baseline assumption." -Gemini

Existence by logical definition makes nonexistence a logical fact. However existence is absolute, and the negation function of "non" cannot logically stand alone but is rather a logical reflection. Therefore we can conclude that existence is the fundamental state of reality and that reality exists. Given the premiss of reality existing, the logical fact of reality not having existed becomes the logical possibility only when reality exists. "When" as a logical construct demands temporal progression. Temporal progression occurs when existence exists, which has the logical progression of existence not having existed. The nonexistence in turn creates a logical progression to existence and when nonexistence exists, temporal progression occurs again and again and becomes infinite in progression because existence is the absolute containing logical progression to the absolute.

When logic becomes infinite, existence by effect changes, and logical progression to omega temporal one ($\Omega\tau_1$) occurs. The movement from now to then ($\Omega\tau \rightarrow \Omega\tau_1$) as a logical progression inertias a continuum ($\mathfrak{c}\tau$).

In an integer absolute discrete existence, life is the logical floating point through integer fractions of movement. A continuum of constant movement also explains the effect of gravity when the event horizon of time occurs in all existence simultaneously. The logical change itself thereby occurs on all depths of logical distance that are the effects of life's biological sensory conclusions such as depth, height and width. To visualize temporal gravity, consider matter expanding without motion, and an object that doesn't fall but matters infinite expansion in logical distance. Logical structures remain structured until either no longer logical or restructured, comparable to Newtons law of motion. However when applying bio-mechanics to Schrödinger's cat equation, bio-logic dictates the cat dying regardless of the emerging ego-logical paradoxes that might entertain.

*Collatz Conjuncture** demonstrates the logical progression of absolutes which reflects the logical distances of biomechanics and the logical progression occurring in all logical distances simultaneously. One can even illustrate the quantum mechanism through *Collatz Conjuncture* when applying temporal mechanics. For all infinite quantum possibilities that are existing as unstructured logic, in order to matter, there is only one possibility that is absolute to the logical progression. Therefore absolute logical existence has one and only one absolute possibility that becomes logical. The event horizon of time-matter when logic becomes absolute to matter occurs at one ($\exists_1$ logical progression of existence). However *Collatz Conjuncture* never reaches zero ($\exists$ existence) but clusters to mass. Not all clusters hold the same mass, and the occurring temporal progression effects gravity. The rest is causality according to classic and quantum frameworks in all bodies.

The arrow of time, when logic becomes infinite and matters mass, the floating point of life floating in an ocean of absolute logic occurs from one ($\exists_1$ logical progression of existence) to zero ($\exists$ existence) and from zero ($\exists$ existence) to negative one ($\neg\exists_1$ logical inversion of existence, the past) through integer fractions of an absolute whole, in order for a logical constant to become the absolute where the only constant is change. The absolute in itself is void of change. *Collatz Conjuncture* also accounts for the non states of absolute logical progression in the negative spectrum which illustrates the absolute logic in temporal polarity, temporal inertia and temporal depth along with temporal gravity.

** The Collatz Conjecture states that no matter which positive integer you start with, the sequence will always eventually reach 1. If n is even, divide it by 2 (n / 2) else If n is odd, multiply it by 3 and add 1 (3n + 1). https://en.wikipedia.org/wiki/Collatz_conjecture.*

Through bio-mechanics, life constructs the universe as we know Her.
The change in life, for example every living cell's constant transformation, every breath we take, and every heartbeat that beats, changes the logical structures of existence that we know as life.

Life's biomechanics structures logic into matter. All life is bio-mechanical and follows the bio-logics of life, but not all life is equally evolved or adapted according to Darwins intelligent design, or as the late Mr Hawking stated: Intelligence is the ability to adapt to change, and life is a constant change.

Through biological senses a living organism constructs Her emo-logical conclusion, the sense of now. Time is the conclusion of all the accumulated nows of life. Since Her dawn, the logical progression of life reflects the total temporal span of life, from the event horizon of matter to it's non existence where life's structured logic fades out into Her past to culminate in a continuum's big bang, lighting up billions and billions of light years, illuminating life's clustered logical structures of mass, life and voids of unstructured logic in an infinite existence.

Bio-logic → emo-logic ↔ emo-mechanics → ego-logic ↔ ego-mechanics

The idea of senses and thoughts is described by Plato as the world of senses and the world of ideas. Temporal mechanics defines these ideas as emo-logic and ego-logic to explain the mechanics of time through life's bio-mechanics. Evolved lifeforms' emo-mechanics, and in some cases also ego-mechanics are all contained in all organisms' bio-mechanics. Species with ego-mechanical ability, such as man, construct their ego-logical structures upon the emo-logical conclusion.

At the event horizon of logical progression when timelessness becomes time, change occurs simultaneously in all existence when life adapts and evolves to the changes of existence, and this constant change becomes the only constant upon which life's mechanics constants Her bio-logical, emo-logical and ego-logical constructs of Herself in the infinite, and time goes on.

At the event horizon of time, life structures logic to matter through biomechanics. An organism simply senses the changes in the logical conclusion of time. Organisms with emotional intelligence construct emo-logical awareness and presence through emo-mechanics, and through the conclusion of emo-mechanics, ego-intelligent species construct and conclude a sense of presence, awareness and understanding.

Man's awareness and presence is constructed through Her emo-logical conclusion that constructs man's ego-logical self as a foundation to construct a sense of reality, language and social evolution.

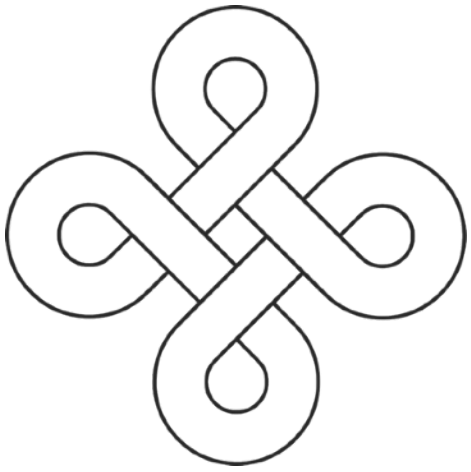

Recent medical studies and discoveries confirm the emo-logical and ego-logical construct to explain the world of ideas and senses which Plato described, that the nervous system and cognitive capabilities in evolved organisms are comprised of two autonomous nervous systems working together.

False cored and unsound ego-logical and emo-logical constructs are the root cause for many forms of autoimmune deficiencies and tendencies that syndrome disorders or the many forms of mutations and symptoms that emerge to result in sickness and dysfunctions.*

** Stephen H. Wolinsky's Quantum Psychology explains ego-logical and emo-logical false cored constructs and their effects. https://www.goodreads.com/book/show/393390.Beginners_Guide_to_Quantum_Psychology.*

The interaction point between the emo- and ego-logical mechanics, when conclusions of an organism meet, constitutes an unary absolute temporal now of an organism, the sense of self where logical conclusions emerge and converge, the point zero (∃ existence) of awareness where the emo-logical concludes to the ego-logical through a temporal axis, shifting emo-logical and ego-logical focus, awareness and presence.

In temporal mechanics, time is life evolving in the logic of existence, where matter dawns and fades, waxing and waning in harmonious oscillation of temporal progressions cascading inertia where clustered logic occurs through the mechanics of life. Life is the ever changing bubble of life floating in an infinite integer absolute ocean of logic. Perhaps this is what Plato and the Bible mean by stating that in the beginning there was only logos, logic of existence.

Can man's emo-mechanics and ego-mechanics find a way to remember the Self's bio-mechanical conclusion to overcome timelessness's oblivion through binary intelligent temporal mechanics for temporal and spacial warping purposes? Probably.

In practice, temporal mechanics has also been demonstrated through *mainvolume's* distance to one ($\exists_1$) computational method and cognitive logical structuring in binary intelligence as binary mechanical and technological implementation of temporal mechanics proving nothing as unstructured logic.

For temporal orientation, through *mainvolume's* man over machine designs, binary intelligence and temporal mechanics, the earthling, man with machine, can find a logical and absolute perspective beyond the homo-organic bubble of life. The earthlings' mind can anchor it's ego-logical and emo-logical senses in the yet unknowns with certainty, at each reflecting moment's emergence and convergence.
